**dialogue #01**  
**groundwork**

4 july 2019 , 13:00 - 17:30 hours, Rotterdam

Vereniging Deltametropool, along with Delft University of Technology, European Policy Research Centre and University of Groningen, cordially invites you to participate in the first practitioner's activity in the series of "The New Planning Dialogue".

In this workshop we introduce our project and the need for this dialogue within the context of the Netherlands. We take this opportunity to begin the co-creative process of thinking together towards the new model of spatial planning. Thus, we expect a lot of opinions and core involvement from all the experts during this workshop.

**In 'The New Planning - groundwork' workshop, we will be debating about the fundamentals of the Dutch planning and development policies, how they have changed and whether they are adequate for our future challenges.**

### How do we participate in the workshop?

The workshop has been divided into 2 parts main questions and few sub-questions. We expect you to write/comment on each board as much as you can. Please make sure to walk to each board to answer the questions. This process is primarily aiming at grasping the most relevant data from the consortia.

#### QUESTION A:

How can the gap between the vision and the implementation be bridged?

Board 1: Which are the present or future challenges that planning should focus on?

Board 2: How "The New Planning", research and dialogue can facilitate planners/ designers/ policy makers/ developers to address current urgencies?

#### QUESTION B:

How can NOVI (nationale omgevingsvisie) support planning and decisions through various scales?

#### Board 3:

At what scale should challenges be addressed by NOVI?

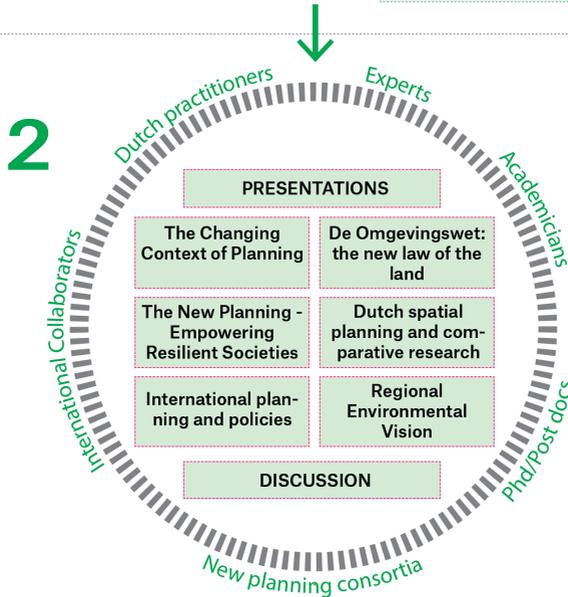

Will a vision at the regional scale (like Hart van Holland) be applicable in your context?

#### Board 4:

What do you want to learn from the plans and visions of other countries?

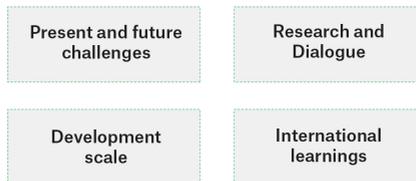

Which places do you prefer to learn from?  
Any interesting examples?

# structure of today's program

A. How can we bridge the gap between the vision and the implementation? What is holding us back to be prepared for the future?

B. How can NOVI (Nationale Omgevingsvisie) support the planning and decisions at various scales?

programme

4 july 2019 , 13:00 - 17:30 hours, Rotterdam
